

# Work in Progress

- **Semantic Information Security in Integrated Operations (SIRCUS)**  
Develop a security and trust framework for the Semantic Web to enable the implementation of secure technologies for communicating organisations supporting Integrated Operations offshore.
- **Intelligent Access Control and Misuse Detection for Healthcare Information Systems (iDetect)**  
Improved access control and misuse detection in healthcare systems can be achieved by utilizing traces of user actions recorded in existing audit logs.
- **Metrics for information security incident response (TRICSI)**  
Develop a set of indicators for incident management and methods for measuring these indicators automatically
- **Intelligent information Security for the Intelligent web (ISI)**  
Develop a set of intelligent security mechanisms to:
  - Provide integrity and authentication services to handle dynamics in content.
  - Provide dynamic access control
  - Provide control of information Usage (privacy)
  - Provide a means to establish and maintain trust relationships.
